

Alphabet Lesson Test Plan And Intern Script

Detailed test plan and script for the Pre-Quran Alphabet lesson.

Audience: SQA testers, admins

Generated: 2026-06-28

Alphabet Lesson Test Plan And Intern Script

Purpose: provide a detailed, repeatable test plan for the Quran Academy Pre-Quran Alphabet lesson and a practical script an intern can follow while recording results in the tracker.

Companion tracker: `docs/alphabet-lesson-test-tracker.html`

How This Was Understood

The Alphabet lesson is the `alphabet_listen` unit inside the Pre-Quran course. It is launched from Moodle through the Quran Academy dashboard/course launcher, then served as a static learner unit with Moodle-managed progress when opened for a managed student.

The unit has 13 ordered learning steps:

- Lecture
- Rules
- Listen
- Watch
- Phonetics
- Repeat
- LetterClue
- Speak
- Match
- SoundClue
- Animate
- Write
- Submit

The lesson depends on:

- Static assets from Bunny CDN or local preview paths.
- Shared runtime files for stepper, playback, progress, speak, match, write, and messaging.
- Moodle web services for managed progress and recordings.
- Browser media APIs for audio/video and microphone recording.
- Moodle reports for progress, quiz/practice, and recording evidence.

Scope

In scope:

- Launching Alphabet from the dashboard and direct unit URL.
- Managed and unmanaged/local preview behavior.

- Stepper sequence, progress, completion, and step-back behavior.
- All 13 Alphabet steps.
- Media playback: lecture video, rules audio, letter audio, videos, animation, and captions where present.
- Settings: voice, speed, repeat, and filters.
- Speak and Submit microphone recording flows.
- Match game flow and failure/retry behavior.
- Write canvas/overlay/print controls.
- Moodle persistence, reports, and recording upload.
- Mobile and desktop layouts.
- Basic accessibility, privacy, and error handling.

Out of scope for this script:

- Full app-wide live sessions, parent dashboards, and teacher marketplace testing.
- Deep pronunciation-scoring accuracy, because Alphabet Speak comparison is currently disabled in config.
- External provider quality testing for ElevenLabs or BigBlueButton, except where links interfere with Alphabet.

Test Environments

Run at least one full pass on integration before staging or production.

- Integration: app path normally contains `/pre_quraan_integration/`.
- Staging: app path normally contains `/pre_quraan_staging/`.
- Production: app path normally contains `/pre_quraan/`.
- Local preview: useful for layout and static behavior, but not a substitute for managed Moodle progress testing.

Required Test Accounts

- Admin account with dashboard, reports, and reset permissions.
- Managed student account with Pre-Quran course access.
- Parent account linked to the managed student.
- Teacher account assigned to the managed student.
- Optional unmanaged/local preview session for static-only checks.

Required Devices And Browsers

Desktop:

- Chrome or Edge latest.
- Firefox if available.

Mobile:

- Android Chrome or mobile emulation.
- iPhone Safari or Safari-like viewport if available.

Minimum viewport checks:

- Desktop: 1366 x 768 or larger.
- Tablet: around 768 x 1024.
- Mobile: around 390 x 844.

Test Data To Capture

For every test run, record:

- Environment.
- URL.
- Browser/device.
- Tester name.
- Moodle user id or test account label.
- Student id.
- Build marker or asset version if visible: `alphabet-phonetics-completefix-20260620a`.
- Console errors.
- Screenshots for failures.
- Network errors for failed Moodle REST calls.
- Recording upload ids or report links where applicable.

Entry Criteria

- Test account can log in to Moodle.
- Student has Pre-Quran course access.
- Alphabet unit files are deployed or available locally.
- Browser has audio playback permission.
- Microphone permission can be granted for Speak and Submit tests.
- Test tracker file opens in browser.

Exit Criteria

- All P0/P1 tests pass or have documented defects.
- All 13 lesson steps have been exercised at least once.
- Progress persists after refresh for managed student.
- Speak and Submit recording flows are tested with success and denied-permission cases.
- Desktop and mobile layouts are checked.
- Reports or backend evidence confirm at least one managed progress update.

Severity Guide

- P0: blocks lesson launch, login, progress, or data privacy.
- P1: blocks completion of a required step or recording upload.
- P2: incorrect behavior with workaround, layout issue, or confusing flow.
- P3: minor copy, polish, or non-blocking visual issue.

Intern Test Script

Phase 1: Setup And Baseline

- Open the tracker: docs/alphabet-lesson-test-tracker.html.
- Enter tester name, environment, browser, device, student id, and run notes.
- Log in as admin and confirm the test student is active, linked to a parent, assigned to a teacher, and has Pre-Quran access.
- Log out and log in as the managed student.
- Open the Quran Academy dashboard.
- Launch the Pre-Quran course and then Alphabet Learn/Listen.
- Confirm the URL, asset environment, and Alphabet page load.

Expected:

- No Moodle error page.
- Alphabet page title/header appears.
- Stepper appears with 13 steps.
- Lecture is the first active step.
- No red console errors.

Phase 2: App Shell And Navigation

- Check header controls, settings, communications pill, and any parent/managed badge.
- Open Settings and change voice, speed, repeat, and filter.
- Close Settings and verify the page still works.
- Refresh the page and verify settings do not corrupt the stepper or current step.
- Use step picker or stepper navigation only where allowed.

Expected:

- Controls fit on desktop and mobile.
- Settings are readable and usable.
- Locked future steps are not freely accessible in managed mode unless QA/free navigation is intentionally enabled.

Phase 3: Step-By-Step Functional Script

Step 1: Lecture

- Start the Lecture step.
- Confirm the lecture video appears and controls are usable.
- Play, pause, resume, and complete or simulate completion if the test environment permits.
- Confirm progress advances to Rules.

Expected:

- Video loads without broken source.
- Progress changes from 0/1 to 1/1.
- Stepper marks Lecture completed.

Step 2: Rules

- Open Rules.
- Start rules audio.
- Confirm rules content scrolls/highlights without covering controls.
- Let audio complete or use approved QA skip if the test run permits.
- Confirm progress advances to Listen.

Expected:

- Rules audio file loads.
- Content is readable.
- Rules completion counts exactly once.

Step 3: Listen

- Start Listen.
- Confirm all alphabet letter tiles appear.
- Confirm letter audio plays in sequence.
- Confirm active tile animation highlights the current letter.
- Change speed/repeat and retest a short pass.

Expected:

- Letter names play.
- No missing audio for common letters.
- Progress advances after required pass.

Step 4: Watch

- Start Watch.
- Open at least three letter videos, including first, middle, and last available letters.

- Confirm video modal opens and closes.
- Confirm audio/video timing does not freeze the page.
- Complete the step.

Expected:

- Video assets load.
- Modal does not trap the user.
- Step completion persists.

Step 5: Phonetics

- Start Phonetics.
- Confirm explainer/modal behavior appears before phonetic playback when required.
- Test at least five letters, including light, heavy, vowel, and distinction examples.
- Confirm phonetic audio/video plays in the configured order.

Expected:

- Explainer behavior is clear.
- Phonetics content does not skip active letters.
- Progress advances.

Step 6: Repeat

- Start Repeat.
- Confirm each letter prompt plays slowly enough for the child to repeat.
- If repeat recording is active, grant microphone and record a short attempt.
- Retest with microphone denied.

Expected:

- Repeat prompts continue through the sequence.
- Denied microphone shows a helpful message and does not crash.
- Progress can continue according to the configured rules.

Step 7: LetterClue

- Start LetterClue.
- Confirm letter clue/anchor content appears.
- Test at least five letters.
- Confirm anchor audio and holds are not too short.

Expected:

- Letter clues correspond to the selected letter.

- Playback continues and completes.

Step 8: Speak

- Start Speak.
- Confirm microphone prompt appears when needed.
- Grant microphone and record at least three letters.
- Confirm completed letters visually mark as done.
- Test replay or confirmation controls if available.
- Refresh and confirm done state/progress is not lost for managed mode.

Expected:

- Speak UI mounts in speakMount.
- Browser permission flow is understandable.
- Recording upload attempts call `local_prequran_save_speak_recording` when managed.
- Speak comparison/scoring should not be expected because config disables comparison.

Step 9: Match

- Start Match.
- Confirm prompt audio auto-plays or a clear manual action is available.
- Select correct and incorrect answers.
- Confirm wrong answers show feedback and lives decrease.
- Use all lives in one run if time allows.
- Complete enough matches to pass.

Expected:

- Match uses 5 lives.
- Correct/wrong visual states are obvious.
- Game can restart after lives are used.
- Match completes after configured pass condition/max games.

Step 10: SoundClue

- Start SoundClue.
- Confirm sound clue audio and word/anchor repetitions play.
- Test at least five letters.
- Confirm progress text updates.

Expected:

- Sound clues are tied to the right letter.
- Word repeats and holds feel stable.

- Step completes.

Step 11: Animate

- Start Animate.
- Open at least three letter writing animations.
- Confirm audio-before-video behavior.
- Confirm modal sizing works on desktop and mobile.
- Complete the step.

Expected:

- Animation video loads and plays at configured speed.
- Modal can be closed.
- No layout overflow.

Step 12: Write

- Start Write.
- Open the writing overlay.
- Draw on the canvas with mouse/touch.
- Test reset.
- Test row/column controls.
- Test print button if browser allows it.
- Complete enough chunks/passes to satisfy the step.

Expected:

- Canvas accepts input.
- Ghost letters/guides are visible.
- Reset clears the current writing area.
- Print opens a printable view without corrupting the lesson.

Step 13: Submit

- Start Submit.
- Try to complete without recording.
- Grant microphone and record final submission.
- Confirm upload succeeds in managed mode.
- Confirm final unit completion/reward state appears.
- Refresh and confirm finished state persists.

Expected:

- Recording is required for Submit.

- Upload calls `local_prequran_save_submit_recording`.
- Maximum upload size is respected.
- Unit completion is visible in UI and reports.

Phase 4: Persistence And Reports

- Refresh after several completed steps.
- Confirm the active step remains correct.
- Log out and log back in as the same student.
- Confirm progress is still present.
- Log in as teacher and open managed report for the student.
- Confirm progress and recordings are visible where expected.
- Log in as parent and confirm no teacher-only/internal data is exposed.

Expected:

- Moodle progress matches the lesson UI.
- Speak/Submit evidence is available to authorized teacher/admin views.
- Parent sees only parent-safe data.

Phase 5: Mobile And Accessibility

- Open Alphabet on mobile viewport.
- Confirm mobile step status and bottom dock appear.
- Open step picker.
- Exercise Listen, Speak, Match, Write, and Submit on mobile.
- Check that buttons are tappable and text does not overlap.
- Use keyboard tab navigation on desktop for main controls.
- Confirm modals can be closed without mouse-only actions.

Expected:

- Mobile layout is usable.
- No controls overlap important content.
- Focus order is reasonable.
- Dialogs do not trap the tester.

Phase 6: Negative And Error Handling

- Disable microphone and test Speak.
- Disable microphone and test Submit.
- Use a user without access and try a direct Alphabet URL.
- Simulate offline/network failure if possible.

- Load with stale cache or hard refresh.
- Try future-step direct navigation in managed mode.

Expected:

- Errors are clear and recoverable.
- Unauthorized users cannot access managed student data.
- Static files do not fail silently.
- Progress is not corrupted by failed requests.

Detailed Test Cases

Use the companion tracker for result recording. The tracker includes these same case groups.

Use the tracker's Test Mode dropdown to switch between:

- Managed only: Moodle-launched student sessions with saved progress, reports, and recording uploads.
- Unmanaged only: static/local preview sessions without Moodle student context.
- Managed + unmanaged: the full regression list.

Launch And Access

ID	Priority	Test	Expected Result
ALPHA-LA-001	P0	Launch Alphabet from managed student dashboard.	Alphabet page opens with no Moodle error and correct student context.
ALPHA-LA-002	P0	Open direct managed Alphabet URL as unauthorized user.	Access is denied or no private student data is exposed.
ALPHA-LA-003	P1	Open local/static preview URL.	Unit renders without managed-only fatal errors.
ALPHA-LA-004	P1	Verify environment path and asset marker.	URL/base path and asset version match target environment.

Stepper And Progress

ID	Priority	Test	Expected Result
ALPHA-SP-001	P0	Confirm 13 steps render in order.	Lecture through Submit appear in correct order.
ALPHA-SP-002	P0	Complete a step and refresh.	Completed state persists for managed user.
ALPHA-SP-003	P1	Use Step Back from a later step.	Confirmation appears and affected progress resets as described.
ALPHA-SP-004	P1	Attempt future locked step.	Future step remains locked unless QA/free mode is enabled.
ALPHA-SP-005	P1	Verify mobile step picker.	Step picker opens, lists steps, and closes cleanly.

Lesson Controls And Action Buttons

ID	Priority	Test	Expected Result
ALPHA-CTRL-001	P0	Dynamic current-step action button updates when moving between steps.	Button label/action matches the active step and never points to the previous step.
ALPHA-CTRL-002	P1	Pause and resume during Listen/Repeat/Watch playback.	Playback pauses, button changes to Resume, and resume continues without restarting unexpectedly.

ID	Priority	Test	Expected Result
ALPHA-CTRL-003	P1	Stop/close modal during Watch, Phonetics, Animate, Write, and Speak/Submit flows.	Modal closes cleanly, media stops when expected, and the stepper remains usable.
ALPHA-CTRL-004	P1	Header/mobile Back button from a lesson step.	User returns to the expected previous page or app surface without losing saved progress.
ALPHA-CTRL-005	P0	Step Back button from a completed/current step.	Confirmation appears, described progress reset happens, and current step moves back correctly.
ALPHA-CTRL-006	P1	Cancel Step Back confirmation.	User remains on the same step and progress is unchanged.
ALPHA-CTRL-007	P1	QA Skip Step button, if visible in test environment.	Step is marked skipped/completed according to QA rules and handoff moves to the next step without corrupting progress.
ALPHA-CTRL-008	P1	QA Skip Step is hidden or unavailable for normal student/parent users.	Non-QA learners cannot skip required learning steps.
ALPHA-CTRL-009	P1	Mobile bottom action dock mirrors the active step action.	Mobile action button, pause slot, and back button are visible/usable without overlap.
ALPHA-CTRL-010	P2	Repeated rapid clicks on action/pause/resume.	UI does not duplicate playback, double-count progress, or freeze.
ALPHA-CTRL-011	P1	Step action button after refresh on an in-progress step.	Correct active step and action button are restored from managed progress.
ALPHA-CTRL-012	P2	Disabled/locked action states.	Buttons show disabled/locked state clearly and do not perform blocked actions.

Step Messages And Audio Prompts

ID	Priority	Test	Expected Result
ALPHA-MSG-001	P0	Step entry message appears for each of the 13 steps.	Message popup/text appears before or at the start of the correct step and matches the active step.
ALPHA-MSG-002	P1	Continue button on message popup.	Continue closes the message and starts/enables the correct step action.
ALPHA-MSG-003	P1	Message audio plays when configured.	Audio prompts load and play for Lecture, Listen, Watch, Phonetics/Sound, Speak, and pass-level prompts.
ALPHA-MSG-004	P1	Steps with text-only messages.	Rules, Repeat, LetterClue, Match, SoundClue, Animate, Write, and Submit still show readable messages even when no audio is configured.
ALPHA-MSG-005	P1	Message audio failure or autoplay block.	Text still appears, Continue remains usable, and the lesson is not blocked.
ALPHA-MSG-006	P1	Pass-level messages for Listen.	Heavy, light, long-letter, and vowel pass messages appear/play at the correct pass.
ALPHA-MSG-007	P1	Pass-level messages for Watch and Repeat.	Heavy, light, long-letter, and vowel pass messages appear/play for those step passes when applicable.
ALPHA-MSG-008	P2	Write pass message.	"Keep writing carefully..." pass message appears without interrupting writing progress incorrectly.
ALPHA-MSG-009	P0	Final unit completion message.	Final completion message appears once after Submit/unit completion and does not repeat after refresh.
ALPHA-MSG-010	P1	Speak Done confirmation message.	Confirmation text appears with Continue/Cancel, Continue marks done, Cancel returns to recording/practice.
ALPHA-MSG-011	P1	Message handoff after Step Back or QA Skip.	Message state follows the new active step and does not show stale previous-step copy.
ALPHA-MSG-012	P2	Clap/visual celebration on configured message.	Watch entry message with clap flag shows the expected celebration effect without layout overlap.
ALPHA-MSG-013	P2	Localized message UI labels.	Message title and Continue label follow selected UI language where localization exists.
ALPHA-MSG-014	P2	Message popup responsive layout.	Message modal fits mobile and desktop screens, text is readable, and controls are tappable.
ALPHA-MSG-015	P1	Duplicate prevention.	Same entry/completion message is not shown repeatedly during rapid refresh, pause/resume, or step rerender.

Media And Settings

ID	Priority	Test	Expected Result
ALPHA-MS-001	P0	Play lecture video.	Video loads, controls work, no console errors.
ALPHA-MS-002	P1	Play rules audio.	Rules audio loads and completion is counted.
ALPHA-MS-003	P1	Play Listen sequence.	Letter audio plays and active tile changes.
ALPHA-MS-004	P1	Change voice/speed/repeat settings.	Playback reflects settings or remains stable without error.
ALPHA-MS-005	P2	Test filter dropdown.	Filter choices are usable and do not break the grid.

Step Coverage

ID	Priority	Test	Expected Result
ALPHA-ST-001	P1	Rules content and scroll/highlight.	Text is readable and highlight/scroll does not hide controls.
ALPHA-ST-002	P1	Watch video modal.	Modal opens, plays, and closes.
ALPHA-ST-003	P1	Phonetics explainer and playback.	Explainer appears and phonetics playback completes.
ALPHA-ST-004	P1	Repeat prompts and microphone fallback.	Repeat runs and denied mic path is handled.
ALPHA-ST-005	P1	LetterClue playback.	Clue content corresponds to active letter.
ALPHA-ST-006	P0	Speak recording.	Recording can be captured and uploaded in managed mode.
ALPHA-ST-007	P1	Match correct/wrong/lives.	Correct and wrong states display and lives behave correctly.
ALPHA-ST-008	P1	SoundClue playback.	Sound clue/word repeats play and progress updates.
ALPHA-ST-009	P1	Animate modal.	Writing animation loads and can close.
ALPHA-ST-010	P0	Write canvas.	Drawing, reset, and completion work.
ALPHA-ST-011	P0	Submit recording required.	Cannot finish without required final recording; upload succeeds when granted.

Focus, Progress, Rewards, And Summary Area

ID	Priority	Mode	Test	Expected Result
ALPHA-FP-001	P0	Both	Verify focus/progress area renders on lesson load.	Focus/progress area is visible, readable, and does not overlap the stepper, action buttons, or lesson content.
ALPHA-FP-002	P1	Managed	Complete a step and verify This Unit stars/progress.	This Unit stars or progress indicators update once for the completed step and remain correct after refresh.
ALPHA-FP-003	P1	Managed	Verify Total Stars and Units Done values for a managed student.	Summary values match the managed student report and do not show another learner or stale account.
ALPHA-FP-004	P1	Both	Check focus badge/state before, during, and after a step.	Focus state changes are understandable and do not hide primary controls.
ALPHA-FP-005	P1	Both	Pause/resume or leave/return while focus tracking is active.	Focus/progress display recovers without double-counting, resetting, or freezing progress.
ALPHA-FP-006	P1	Managed	Refresh after progress summary changes.	Managed summary reloads from the correct student state and does not flash incorrect values for another user.
ALPHA-FP-007	P2	Both	Hard refresh/cache check for progress area labels and values.	Latest labels and values appear; stale cached text or old misspellings are not visible.
ALPHA-FP-008	P1	Both	Mobile focus/progress layout.	Progress chips, stars, and focus text wrap cleanly on mobile with no clipped numbers or labels.
ALPHA-FP-009	P1	Unmanaged	Unmanaged progress summary behavior.	Static/local session shows local-only progress or a clear unmanaged state and does not attempt to display Moodle-only totals as saved data.

Labels, Copy, And Spelling

ID	Priority	Mode	Test	Expected Result
ALPHA-LBL-001	P0	Both	Verify the 13 step labels and spelling.	Labels read exactly: Lecture, Rules, Listen, Watch, Phonetics, Repeat, LetterClue, Speak, Match, SoundClue, Animate, Write, Submit.
ALPHA-LBL-002	P1	Both	Scan lesson UI for misspelled English labels.	No visible misspellings, broken capitalization, or old placeholder labels remain.
ALPHA-LBL-003	P1	Both	Verify Arabic and bilingual text rendering.	Arabic labels render right-to-left where intended and do not show mojibake, missing glyphs, or replacement boxes.
ALPHA-LBL-004	P1	Both	Verify dynamic button labels across all steps.	Play, Pause, Resume, Continue, Back, Step Back, Skip Step, Done, Record, Stop, Reset, Print, and Submit labels match the action being performed.
ALPHA-LBL-005	P2	Both	Verify Settings labels.	Voice, Speed, Repeat, Filter, and related option labels are spelled correctly and remain readable after changes.
ALPHA-LBL-006	P2	Both	Verify labels on mobile.	Buttons, chips, progress labels, and modal titles do not clip, overlap, or wrap awkwardly.
ALPHA-LBL-007	P1	Both	Verify message text grammar/spelling.	Entry, pass, warning, confirmation, and completion messages are child-friendly, spelled correctly, and match the current step.
ALPHA-LBL-008	P2	Both	Verify tracker/report labels.	Teacher/admin report labels and exported tracker labels use consistent spelling and terminology.

Unmanaged Mode Use Cases

ID	Priority	Mode	Test	Expected Result
ALPHA-UM-001	P0	Unmanaged	Launch the static Alphabet unit without managed Moodle context.	The unit opens without requiring a Moodle token, managed student id, or dashboard launch.
ALPHA-UM-002	P1	Unmanaged	Use an unmanaged/local preview URL while logged out.	Static preview works for allowed content and does not reveal private learner data.
ALPHA-UM-003	P1	Unmanaged	Verify unmanaged step navigation and free/practice behavior.	Available steps can be exercised according to unmanaged rules, and any locked managed-only behavior is clearly communicated.
ALPHA-UM-004	P0	Unmanaged	Watch network activity during unmanaged progress.	No Moodle progress-save, speak-upload, or submit-upload calls are made unless the session is explicitly converted to managed.
ALPHA-UM-005	P1	Unmanaged	Refresh an unmanaged session after completing a step.	Expected local-only state is retained or reset according to design; no false managed completion is created.
ALPHA-UM-006	P1	Unmanaged	Try Speak and Submit recording in unmanaged mode.	Recording is disabled, local-only, or clearly explains that managed upload is required; the lesson does not crash.
ALPHA-UM-007	P1	Unmanaged	Use media, settings, match, animate, and write in unmanaged mode.	Core static lesson interactions still work without Moodle services.
ALPHA-UM-008	P0	Unmanaged	Verify privacy in unmanaged mode.	No student name, parent account, teacher-only report link, or prior managed progress is visible.
ALPHA-UM-009	P2	Unmanaged	Export tester evidence for unmanaged run.	Tester can record notes/evidence in the SQA tracker even though no Moodle learner report is expected.

Reports And Data

ID	Priority	Test	Expected Result
ALPHA-RD-001	P0	Moodle progress save.	Network call succeeds and report reflects progress.
ALPHA-RD-002	P1	Speak recording report.	Teacher/admin can see uploaded Speak evidence.
ALPHA-RD-003	P0	Submit recording report.	Teacher/admin can see final submission evidence.
ALPHA-RD-004	P1	Parent-safe visibility.	Parent sees permitted feedback only, not internal teacher/admin data.

Responsive, Accessibility, And Resilience

ID	Priority	Test	Expected Result
ALPHA-UX-001	P1	Desktop layout.	No text overlap or clipped buttons at 1366 x 768.
ALPHA-UX-002	P1	Mobile layout.	Bottom dock, step picker, grid, and modals are usable.
ALPHA-UX-003	P2	Keyboard navigation.	Main controls and dialogs are keyboard reachable.
ALPHA-UX-004	P1	Microphone denied.	Speak/Submit show recoverable messages.
ALPHA-UX-005	P1	Network/API failure.	User gets clear failure and progress is not corrupted.
ALPHA-UX-006	P2	Hard refresh/cache.	Latest deployed assets load and no stale UI remains.

Suggested Improvements For Testing

- Add a visible build/version badge to the Alphabet unit in non-production environments.
- Add a QA-only "copy diagnostics" button that exports current step, user id, student id, environment, asset version, and last Moodle REST status.
- Add a dedicated test student reset button in admin tools for Alphabet progress only.
- Add report links directly after Speak and Submit upload success in integration/staging.
- Add automated smoke tests for: page load, 13-step presence, first media source availability, stepper rendering, and managed progress GET/SET.
- Add a small media manifest verification script for Alphabet audio/video/animation files.
- Keep one golden managed-student account and one locked unauthorized account for repeatable regression testing.
